

## Challenges and how I overcome:

1. **Challenge:** I initially had trouble remembering Linux command syntax and their options, which caused frequent errors.

**How I overcame it:** I practiced the commands multiple times and referred to the command help (man pages) whenever I got stuck.
2. **Challenge:** I encountered "permission denied" and file path errors while working with files and directories.

**How I overcame it:** I carefully verified the current directory using `pwd`, checked file permissions with `ls -l`, and corrected the commands before running them again.
